Database :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

post-incoulation with Glomus versiforme. The library was
made from a mixture of RNA from each of these stages."
/lab_host="E. coli strain XLOLR" is ECORI; Site_2:
/note="Vector: pBluescript SK: Site_1: ECORI; Site_2:
XhOI; CDNA was prepared from polyA+ enriched RNA from
roots harvested at 10, 17, 22, 31 and 38 days
post-incoulation with Glomus versiforme. The CDNA was
directionally ligated into the Unizap XR vector from
Stratagene and packaged using Glogapack III Gold packaging
extracts. Plasmids containing cDNA inserts were excised
from the recombinant lambda-Zap phage using Ex-assist
helper phage and propagated in XLOLR cells."

/lab host="E. col; strain SOLR"
/lab host="E. col; strain SOLR"
/note="vector: pBluescript SK +/-; Site_1: EcoRI; Site_2:
Xhoi: cDNA was prepared from polyA+ enriched RNA from the mixture of effective nodules of 40 day old plants harvested 36 hours post shoot removal and nodules collected from 2 month old plants at mid-pod stage. The cDNA was directionally ligated into the Uni-ZAP XR vector from Stratagene and packaged using Gigapack III Gold packaging extracts. Plasmids containing cDNA inserts were excised from the recombinant lambda-ZAP phage using Ex-Assist helper phage and propagated in SOLR cells."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ter: 580-221-7380

/clone="Wetcor: pBluescript pSK; Site_1: EcoRI; Site_2:
Xhoi; plants were grown in an aeroponic chamber for 14
days on nitrogen-rich medium followed by 3 days on N-free
medium. RNA was extracted from root tips (1.3 cm). CDNA
was prepared from polyA+ enriched RNA. The cDNA was
directionally ligated into Uni-rapXR vector from
Stratagene and packaged using Gigapack Gold packaging
extracts. Plasmids contraining cDNA inserts were
mass-excised from phage stocks using ExAssit helper phage
and propagated in SOLR cells. Clone ordering and
sequencing was performed by the Centre National de
Sequencage (Genoscope, Evry, France)."
Squencage (Genoscope, Evry, France)."

/note="Vector: pBluescript SK-; Site_1: EcoRI; Site_2:
XhOI; The library was constructed by Dan Howe, University
of Kentucky. CDNAs were synthesized from poly(A)+ RNA
by oligo d(T) priming and directionally cloned into the
Uni-ZAP XR lambda vector. The library was mass excised
as phagemids and rescued in SOLR cells. The plasmid
library was recovered from the SOLR cells and transformed
in mass into DH10B cells for sequencing. WARNING: the
library contains a small percentage of cDNAs derived from
the bovine host cells.

SnEST4a15c10.y1 cSn 1 S neurona invitro merozoite cDNA Sarcocystis
neurona cDNA 5', mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /lab_host="minocolle"
//lab_host="minocolle"
//lab_host="Wetcor: pBluescript SK-; Site_1: EcoRI; Site_2:
Xho1; The library was constructed by Dan Howe, university
of Kentucky.

CDNAs were synthesized from poly(A)+ RNA
by oligo d(T) priming and directionally cloned into the
nin_ZAP xx lambda vector. The library was mass excised
as phagemids and rescued in SOUR cells. The plasmid
library was recovered from the SOLR cells and transformed
library contains a small percentage of CDNAs derived from
the bovine host cells.
                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Email: est@watson.wustl.edu

AAQ73500 shows the Pseudorabies virus (PRV) large latency transcript (LLT). The basic sequence is derived from PRV strain InFh and PRV strain Ka. The LLT overlaps and is transcribed in the opposite orientation with respect to the EPO (early polypeptide 0) and the immediately early gene (TE180). EPO is nonessential for replicatio, LLT is the only gene expressed during PRV latency, and the IE180 in recessary for PRV replication. However there are consistent of the Secondary for PRV replication. However there are confined to the IE180 in the genome. It is expected that PRV lacking one of the IE180 copies is viable. Deletions in the non-overlapping cegions of these 3 genes will generate single deletion routants. While deletions in overlapping regions will generate double deletion mutants. The invention is concerned with the construction of attenuated viruses which have a reduced ability to reactivate from latency. This can be achieved by functionally disabling the expression of the EPO gene, or by disrupting the synthesis of the LLT, or both. (See also

```

immunosuppressants, agents to treat asthma, chronic obstructive pulmonary disease as well as other diseases involving respiratory inflammation, cholesterol-lowering agents or macrolide-based antibiotics which are active against a variety of organisms, e.g., bacteria, including multi-drug resistant pneumococci and other respiratory pathogens, as well production of biologically active macrolides. The macrolide biosynthetic production of biologically active macrolides. The macrolide biosynthetic neomethymycin and narbomycin. The alternative termination of polyketide synthesis may be useful to prepare novel antibiotics and polyhydroxyalkanoate (PHA) monomers. The compounds produced by the recombinant host cells are useful as biopolymers, e.g., in packaging or blomedical applications, to engineer PHA monomer synthases or to prepare biologically active agents, such as chemotherapeutics, The invention relates to an isolated and purified nucleic acid segment comprising a deosamine blosynthetic gene cluster, a fragment or its biologically active variant, where the nucleic acid sequence is not derived from the eryC gene cluster of Saccharopolyspora erythraea or Streptomyces antibioticus. The invention also relates to a macrolide biosynthetic gene cluster, or fragments thereof. The macrolide biosynthetic gene cluster encodes proteins which synthesise methymycin, narbomycin, narbom as viral parasitic pathogens, or as crop protection agents (e.g., fungicides or insecticides) via expression of polyketides in plants. Sequences AAZ87295-287302 represent macrolide biosynthetic genes from

The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myelold leukaemia, Alzheimer's disease, AIDS, epllepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PECR) primers, oligomers, and for chromosome. Compared to the polymerase chain recombinant production of (II). The control of (II) and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in classomatics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences of the invention.

Contains sequences of the invention.

Contains sequence data for this patent did not appear in the printed contains and intectly from WIPO contains and intective format directly from WIPO contains and products dependences of the intervence of the format directly from WIPO conta

The invention relates to an isolated and purified nucleic acid segment comprising a desosamine biosynthetic gene cluster, a fragment or its biologically active variant, where the nucleic acid sequence is not derived from the eryC gene cluster of Saccharopolyspora erythraea or Streptomyces antibioticus. The invention also relates to a macrolide biosynthetic gene cluster, or fragments thereof. The macrolide compounds. Recombinant or augmented cells comprising the desosamine compounds. Recombinant or augmented cells comprising the desosamine production of biologically active macrolides. The macrolide biosynthetic gene clusters are useful for the production of biologically active macrolides. The macrolide biosynthetic proteins are useful for synthesis of methymycin, pikromycin, pikromycin, neomethymycin and narbomycin. The alternative termination of polyketide synthesis may be useful to prepare novel antibiotics and polyhdroxyalacated (PHA) monomers. The compounds produced by the compoundant host cells are useful as biopolymers, e.g., in packaging or biomedical applications, such as chemotherapeutics, immunosurores are agents, such as chemotherapeutics, immunosurores and agents, such as chemotherapeutics, immunosurores are agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                multi-drug resistant pneumococci and other respiratory pathogens, as well as viral parasitic pathogens, or as crop protection agents (e.g., fungicides or insecticides) via expression of polyketides in plants. Sequences AAZ87295-Z87302 represent macrolide biosynthetic genes from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          immunosuppressants, agents to treat asthma, chronic obstructive pulmonary disease as well as other diseases involving respiratory inflammation, cholesterol-lowering agents or macrolied-based antiblotics which are active against a variety of organisms, e.g., bacteria, including

overlapping regions will generate double deletion mutants. The invention is concerned with the construction of attenuated viruses which have a reduced ability to reactivate from latency. This can be achieved by functionally disabling the expression of the EPO gene, or by disrupting the synthesis of the LLT, or both. (See also AAQ73500 and AAR60620-24)
                                                                                                                                                         AAQ73501 shows the DNA sequence of the early polypeptide 0 (EPO) gene. EPO is nonessential for replication, LLT (large latency transcript) is the only gene expressed during PRV latency, and the IE180 gene is absolutely necessary for PRV replication. However there are 2 copies of IE180 in the genome. It is expected that PRV lacking one of the IE180 copies is viable. Deletions in the non-overlapping regions of these 3 genes will generate single deletion routants, while deletions in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               fragment carrying sequences characteristic of latent

                                                                                                                                                                                                                                                                                         The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders,
                                                                                                                                                                                                                                                                                                                                                   including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                         leads to sphingomycin resistance). Also, since the encoded protein is essential for plant growth, inhibition of the encoded protein could lead to inhibition of plant growth and thus be a potential herbicide. Altering the level of expression from the present sequence may allow for the modification of the physical properties of ceramides (used in the
                                                                                                                    The Pseudomonas syringae cyclic lipodepsipeptide syringomycin inhibits the growth of Saccharomyces cerevisiae. A yeast gene, SYR2, confers P. syringae resistance and is also necessary for sphingolipid biosynthesis and therefore growth. It is thought that SYR2 mutations leading to gene protein function downregulation, would result in growth inhibition. The present sequence is the coding sequence of a SYR2 homologue clone from rice, rire.pk0092.e4.fis. The present sequence may be used to create transgenic plants in which the encoded protein is present at altered level. The level of the encoded protein would be related to the level of sphingomycin (and Pseudomonas) resistance (i.e. increased protein levels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae and/or orthomyxoridae), bacterial antigens (e.g. toxoplasma, haemophilus, campylobacter, clostridium, Escherichia coli and/or staphylococcus), fungal antigens and/or parasitic antigens. The method is also useful for preventing cancer, asthma, infectious disease, allergy or immune deficiency. The present sequence can also be used to redirect a Th2 to a Th1 immune response and to activate immune cells.

```
The invention relates to nucleic acid sequences (AAX22211 to AAX22282)
encoding human secreted proteins (AAY01383 to AAY01454). The secreted
proteins ignes sequences are deposited with the ATCC under deposit number
ATCC 209138, 209139 or 209141. Host cells containing vectors comprising
the nucleic acid sequences are used for the recombinant expression of
the nucleic acid sequences are used for the recombinant expression of
the nucleic acid sequences are used for the recombinant expression of
the presence of mutations the amount of the new polynucleotides can be also diagnosed
by determining the amount of the new polynucleotides. The nucleic acid
sequences, or its fragments, are useful for chromosome identification
creamed an unclease and triplex-forming therapeutics; in gene
therapy; for (forensic) identification of individuals; as molecular
weight markers; to identify related sequences or specific mRNA; in
preparation of oligomers and to raise anti-DNA antibodies. Antibodies are
useful as immunoassay reagents (including for in vivo imaging) and
therapeutically to inhibit or activate particular polypeptides. A very
wide range of disorders may be treated with the polynucleotide and
therapy infections. The sequences may also be useful in wound healing,
or other infections. The sequences may also be useful in wound healing,
to modulate differentiation of embryonic stem cells, to modulate weight,
appetite, behaviour etc. and as food additive or preservative. The
present sequence represents a gene encoding a human secreted protein
(see descriptor line for gene number and clone identification).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
New nucleic acids encoding secreted human proteins – potentially useful for treating and diagnosing diseases and identifying specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; immune system disease; cytosine methylation; antiasthmatic; antianteriosclerotic; antianaemic; cytostatic; nootropic; neuroprotective; anti-HIV; anticonvulsant; ophthalmological; antirheumatic; antiatrhritic; antidiabetic; antipsoriatic; antiinflammatory; cancer; eye disease; arteriosclerosis; anaemia; acute myeloid leukaemia; Alzheimer's disease; AIDS; epilepsy; neurofibromatosis; rheumatoid arthritis; psoriasis; bowel disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the identified cDNA sequences using BLASSYN 2.0 with the corresponding DDBJ accession no. and RGP clone ID. A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein'. A gene without significant homology to any protein but with EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted with a gene prediction program is classified as a 'hypothetical' protein.

The orientation of the sequence is from T7 to SP6 of the PAC clone. This sequence of PO583G08 clone has an overlap with OJ1276B06 (DDBJ: AP003339) clone at the position 1 to 15.586 and with OSJNBa0089K24 (DDBJ: AP003215) at the position 134,939 to 135,295 of 5', end. The sequence of this clone starts at the position 159,588 of OJ1276B06 and ends at the position 356 of OSJNBa0089K24. Detailed information on overlap and assembly quality together with approach the content of this country is available at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            on Jul 24, 2001 this sequence version replaced gi:13027312. Genes were predicted from the integrated results of the following: GENSCAN1.0, BLASTN2.0, BLASTN2.0 as well as SplicePredictor (October 1998 version). The genomic sequence was searched against NCBI NonRedundant Protein database, nr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        annotation of this entry is available at http://rgp.dna.affrc.go.jp/GenomeSeq.html.Location/Qualifiers

                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                              administration of interferon alpha (IFN-alpha), involving administering and immunostimulatory nucleic acid (ISNA). The sequences of a number of such nucleic acids are also provided. These may comprise oligonuclectides with phosphorothicate backbones, palindromes, or G-rich sequences. The sequences of the invention are useful in the treatment of proliferative diseases, such as cancers, and viral infections. The present sequence is an example of an immunostimulatory oligonucleotide.

response. The method comprises administering an immunostimulatory nucleic acid to a non-rodent subject in sufficient quantity to stimulate an immunostimulatory. The present sequence is one such immunostimulatory nucleic acids can be pyrimidine rich (py-rich) or thymidine (T) rich. The method is used to vaccinate subjects against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae, nachomyxoviridae), bacterial antigens (e.g. herpesviridae, retroviridae and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma, staphylococcus), fungal antigens and/or parasitic antigens. The method is also useful for preventing cancer, astham, infectious disease, allergy or immune deficiency. The present sequence can also be used to redirect a Th2 to a Th1 immune response and to activate immune cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

                                                                           that are involved in cell cycle regulation. Also provided are recombinant expression cassettes (including ZmCycD in sense or antisense orientation), host cells, transgenic plants (especially corr, sorghum, sunflower, saflower, wheat, rice, alfalfa or corr, sorghum, sunflower, saflower, wheat, rice, alfalfa or corr, sorghum, sunflower, saflower, wheat, rice, alfalfa or corr, sorghum, sunflower compositions. A claimed method of modulating the level of CycD protein in a cell comprises transforming the cell with a recombinant expression cassette comprising a CycD polynucleotide linked to a promoter, and growing the cell for a time sufficient to induce expression of the polynucleotide sufficient to modulate (increase or decrease) the sufficient to alter cell. The CycD protein is present in an amount sufficient to alter cell division, increase the number of cells dividing, improve transformation frequencies, alter plant, height or size, enhance or inhibit organ (seed, root, shoot, ear, cassel, stalk, pollen, stamen) growth, produce organ ablation, contained the contained or cell and contained the contained or cell contained the contained or cells cassel, stalk, pollen, stamen) growth, produce organ ablation, contained the contained or cell contained the cell cort cell contained the cell contained the cell contained the cell 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0; Gaps
associated protein, releasing the E2F transcription factor which activates DNA synthesis. The invention provides maize CycD polynucleotides (see AAZ94581.84) and polypeptides (see AAZ79321-24)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            enhance embryogenic response, increase callus induction, provide positive selection, increase plant regeneration, alter the time that cells are arrested in Gl or GO phase or in a particular cell cycle, improve response to environmental stress including dehydration, heat or cold, increase the number of pods per plant, increase the number of seeds per pod or ear, alter the lag time in seed development, provide hormone independent cell growth, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     increase the growth rate of cells in bioreactors. The level of CycD protein in the cells is transiently modulated by introducing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human fibrinogen; gamma-chain; synthetic 3'-end fragment; Bluescript II KG+; plasmid; mpl9gamma2; expression vector; pREP9; variant fibrin chains; unable to self polymerise; fibrinogen; surgical sealants; thrombin activation; pure starting material; fibrin-derived factors; regulation; anglogenesis; platelet aggregation; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CycD polynucleotides can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       79.3%; Score 21.4; DB 21; Length 1734; 95.7%; Pred.                                                                                                                                                    Variant chains of fibrin unable to self polymerise - are able to react with fibrinogen, partic. useful in surgical sealants that do not require activation of thrombin
                                                                                                                                                                                                                                                                                        (a partial nuclectide and amino acid sequence of which is given in AAT05310 and AAR84551, respectively) to be purified. They were then ligated along with the synthetic 3'-end fragment AAT05309, and cloned into a mp19 vector to give mp19gamma2, which encodes a complete gamma-chain. mp19gamma2 was then subcloned into the expression vector pREP9, which was used in the prodn. of variant fibrin chains unable to self polymerise. These chains are able to react with fibrinogen, partic. useful in surgical sealants that do not require thrombin activation, and are pure starting materials for fibrin-derived factors that regulate angiogenesis,
                                                                                                                                                                                                                                           Using the primers AAT05292/93 a 310 bp fragment from a human fibrinogen gamma-chain cDNA clone was amplified, and digested to allow the N-terminal and C-terminal portions of the gamma-chain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                  The sequence was used to produce a fibrin sealant. The specification describes a fibrin sealant which contains a human fibrin-homologue. The sealant comprises a recombinant variant fibrin chain differing from the naturally occurring gamma-chain by one or more mutations or deletions in a C-terminal region following a coiled-coil forming region. When incorporated into a fibrin-homologue, the homologue cannot self-polymerize but forms non-covalent bonds or polymerize with fibrinogen. The fibrin sealants are used in surgery to control bleeding or to adhere two tissues to each other. The recombinant fibrin chains are used may be used in the preparation of safe and convenient surgical adhesives and sealants, and as sources of substantially pure starting material for the production of fibrin-derived factors that regulate angiogenesis, or platelet aggregation. Fibrin and fibrin homologues may be used as
                                                                                                                                                              New fibrin sealant containing human fibrin homolog unable to self-polymerize but forms non-covalent bond with fibrinogen, useful in surgery for controlling bleeding or adhering tissues to each other -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Canine adenovirus synthetically modified to contain exogenous DNA where non-essential region of virus has been deleted, useful in immunogenic, immunological or vaccine composition(s)

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher enkaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
The present plasmid relates to an invention where a canine adenovirus (cAd) is synthetically modified to contain exogenous DNA, where a non-essential region of the cAd has been deleted.
                                                                                    An immunogenic, immunological or vaccine composition comprising the the above cAd can be used to induce an immunological response in a host vertebrate, preferably a canine or human, to which it is administered, or transfer genetic information to an animal or
                                                                                                                                                                                                                                human. The exogenous DNA preferably encodes an expression product comprising an epitope of interest, biological response modulator, growth factor, recognition sequence, therappeutic gene or fusion protein, e.g. a Morbillivirus antiqen, rabies glycoprotein, tumour necrosis factor or melanoma associated antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Drosophila; developmental biology; cell signalling; insecticide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Drosophila melanogaster genomic polynucleotide SEQ ID NO 12247.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 7379;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            molecules associated with the cell cycle and specific PCR primers of the invention. The sequences are useful for detecting the methylation state of all CpG dinucleotides in a sequence and therefore for analysing associated diseases. By analysing cytosine methylations in the pretreated DNA, genetic and/or epigenetic parameters for the diagnosis and therapy of existing diseases or the predisposition to specific diseases can be ascertained. The parameters may be compared to another set of genetic and/or epigenetic parameters, the differences serving as basis for diagnosis and/or prognosis events which are disadvantageous to patients. The sequences of the invention are useful for the diagnosis and therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   infection, neurodegenerative disorders, graft-versus-host disease

Sequence 7317 BP; 1665 A; 326 C; 1881 G; 3445 T; 0 other;

```
The sequence is that of the vCP253 insertion, comprising the vaccinia in promoter and the FIV gag/protease ORF, which was used in the construction of a vector comprising comprises exogenous DNA (1) encoding at least one lentivirus epitope (II). Such a vector is useful in vaccines to generate a therapeutic or protective response in humans or animals against lentivirus, optionally in association with subsequent booster doses (of (II) or inactivated lentivirus).

A particular application is protection against FIV infection. The vector is also used to express the products of (I) in vitro or ex vivo (i.e. with return of transfected cells to the patient).

Antibodies may also be used for treatment or prevention of infection, or for diagnostic detection of lentiviral antigen or antibody. (I) is useful as a source of primers and hybridisation probes. Priming with the vector them boosting with corresponding subunit vaccine will protect against both homologous and heterologous strains. Since the vector lacks some virus-encoding genes, its virulence is attenuated and they are safer to use.
                                                                                                                                                                                                                                                                         Consensus I3L promoted FIV gag/protease expression cassette in vCP253.

Such a vector is useful in vaccines to generate a therapeutic or protective response in humans or animals against lentivirus, optionally in association with gubsequent booster doses (of (II) or inactivated lentivirus). A particular application is protective and instruction repeated or vector is also used to express the products of (I) in vitro or ex vivo (I.e. with return of transfected cells to the patient).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Vector containing exogenous DNA encoding a lentivirus epitope and derived expression products - or antibodies, useful in human or animal vaccines particularly against immune deficiency viruses
                                                                                                                                                                                                                                                                                            Consensus vCP329 H6 FIV 97TM/I3L FIV gag/pol expression cassette.

```
New recombinant lipopolysaccharide, useful as low-toxicity adjuvant for vaccines, has altered pattern of acylation and/or phosphate residues attached to glucosamine.
Antibodies may also be used for treatment or prevention of infection, or for diagnostic detection of lentiviral antitien or antibody. (1) is useful as a source of primers and hybridisation probes. Priming with the vector then boosting with corresponding subunit vaccine will

A BLAST search on genococcal genome sequences was made using htral/mabB gene sequences from Escherichia coli and Haemophilus influenzae. Several contigs were identified, and PCR primers based on these sequences were designed. The primers were used in the PCR amplification of meningococcal chromosomal DNA to generate a 500
                                                                                                                           protect against both homologous and heterologous strains. Since the vector lacks some virus-encoding genes, its virulence is attenuated and they are safer to use.
                                                                                                                                                                                                                                                                                                                                                                                                                ;

pp product. This was used as probe for the isolation of the present, larger htrB1 gene. The htrB1 gene codes for an originar ferase (see AAY79683) involved in the secondary acylation of lipopolysaccharide (LPS). Mutations in the htrB1 gene provide an LPS product which is less toxic than native LPS, but which as higher adjuvant activity. The invention is directed at novel less toxic forms of LPS that are obtained through genetically modified Gram-negative bacteria. The novel LPS has fewer secondary acyl chains being bound to primary acyl chains. Define molecule of LPS than the native LPS, the secondary acyl chains being bound to primary acyl chains. And the primary acyl chains being bound to the glucosamine of the LPS molecule. Secondary acyl chains being bound to the glucosamine of the LPS molecule. Deaterium, such as N. meningitidis, having a mutation in a gene encoding a protein involved in lipid A biosynthesis, particularly controlling infections caused by organisms from which the LPS is controlling infections caused by organisms from which the LPS is controlling infections caused by organisms from which the LPS is derived, or by other organisms. The acylation pattern of the recombinant LPS is homogeneous, which facilitates standardization. A partial open reading frame with homology to the E coli ruvc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ma Y;

                                                                                                                                                                                                                                                            The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce
                                                                                                                                                                                                                                                                                                                                                      production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to evaluating strain variation within and between different populations of the tuberculosis bacterial pathogen,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          inflammation.

Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAK80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Evaluating strain variation of Mycobacterium tuberculosis, comprises determining the nucleotide sequence of the strain at positions in the genome corresponding to positions where M. tuberculosis strains CDC 1551 and H37Rv differ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mycobacterium tuberculosis; strain H37Rv; strain CDC 1551; genome; variation; epidemiology; patient treatment; epidemic monitoring; ds.

GENO-) INST GENOMIC RES

Fraser CM, Venter JC; Fleischmann RD, White OR, WPI; 2001-647261/74. Evaluating strain variation of Mycobacterium tuberculosis, comprises determining the nucleotide sequence of the strain at positions in the genome corresponding to positions where M. tuberculosis strains CDC 1551 and H37Rv differ

Claim 3; SEQ ID NO 1; 3pp + Sequence Listing; English.

The invention relates to evaluating strain variation within and between different populations of the tuberculosis bacterial pathogen, Mycobacterium tuberculosis or related Mycobacterium by determining the nucleotide sequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the nucleotide sequences of M. tuberculosis strains CDC 1551 (AAI99683) and H37Rv (AAI99682). The method is useful for evaluating strain variation of M. tuberculosis and has valuable application in the fields of tuberculosis genetics, epidemiology, patient treatment and epidemic monitoring

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      and associated flanking species. The sequences comprise a central core repeat sequence, especially selected from the sequences AAA32094-A32096 with left and right flanking sequences. The polynucleotide sequences can be used in the detection of DNA polymorphisms, in genome mapping, in positional cloning of genes, in variety identification and in evaluation of genetic variability within and between plant tissues, populations, cultivars, species and species glorops. They may also be used to design hybridization probes for oligonucleotide fingerprinting and library screening and to design primers for microsatellite-primed PCR. Microsatellite markers are

Patent No. 6090333
GENERAL INFORMATION:
APPLICANT: Fischer, Laurent
TITLE OF INVENTION: PROMOTERS, EXPRESSION CASSETTES,
TITLE OF INVENTION: BECOMBINANT VIRUSES, METHODS FOR MAKING, AND USES THEREOF NUMBER OF SEQUENCES: 120
CORRESPONDENCE ADDRESS:
ADDRESSEE: Curtis, Morris & Safford, P.C.
STREET: 530 Fifth Avenue
CITY: New York

COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/258,261B
FILING DATE: 08-JUN 1994
CLASSIFICATION BATA:
APPLICATION NUMBER: US/08/258,261B
FILING DATE: 01-JUN-1995
ATFORNEY/AGENT INFORMATION:
NAME: Eller, James Scott
REGISTRATION NUMBER: 36,129
REFERRNCE/DOCKET NUMBER: 36,129
REFERRNCE/DOCKET NUMBER: 36,129
TELECOMMUNICATION INFORMATION:
TELEPRAN: 919-541-8619
           APFLICANT: Uknes, Scott Joseph
TITLE OF INVENTION: Genes for the synthesis of
TITLE OF INVENTION: antipathogenic substances
TITLE OF SEQUENCES: 22
CORRESPONDENCE ADDRESS:
ADDRESSEE: Ciba-Geigy Corporation
STREET: 7 Skyline Drive
CITY: Hawthorne
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  APPLICANT: Gaffney, Thomas Deane
